Univeristy

ACKNOWLEDGEMENTS

The project director wishes to express his appreciation and thanks to the following members.

Ms. Terry McElrath
Principal Recreation Analyst

Mr. Jeff Murgas
Recreation Analyst

Also thanks are extended to those persons who provided recreation system descriptions for this inventory.

PREFACE

This publication reports on the first phase of a three year study for the "Assessment and Improvement of Recreation Data and Information Systems." The first phase was to conduct a nationwide inventory of recreation systems. The remaining phases involve an assessment of design and operation of data systems in light of recreation management information needs, and the development of a demonstration package of management systems.

Recreation agencies or agencies with the responsibility of planning for recreation have need for automated management systems to support their efforts at operating efficiency and agency effectiveness. Computerized systems have been developed to assist agency personnel in managing accounting activity, cost analysis, land resource inventory, wildlife, facility development and visitor behavior when properly designed meet efficiency and effectiveness performance objectives.

This publication was designed as a vehicle for the transfer of information regarding the current use of recreation systems. It can be used as a resource document to ascertain the who, what, where, and how questions regarding computer use and recreation management system applications.

How to Use the RECSYSMS

- Step 1: Find the general subject category that you are interested in on the next page, "RECSYSM Subject.:
- Step 2: Turn to the page number pertaining to that particular subject.
- Step 3: Under each general subject heading are listed several code numbers that pertain to a specific subject. Find the specific subject you need.
- Step 4: Under each code you will find a list of numbers. The numbers refer to those computer systems that process the type of information specified by the code. The system numbers are listed in order (0001 thru 0376).

Please note that many of the systems are listed under more than one code.
